BLIS™ Bausch + Lomb Injector System consists of a reusable handpiece (body and plunger) and a sterile single-use disposable cartridge. The reusable handpiece must be sterilized prior to use according to instructions provided in the Directions For Use.

1. Insert the plunger into the handpiece body and align the protruding key on the plunger to the corresponding slot on the handpiece body.
2. Insert the cartridge into the handpiece slots with the IOL diagram facing up and the tip bevel facing down.
3. Push down firmly on the back end of the cartridge and all the way forward until it snaps securely into place.
4. Slowly advance the IOL into the cartridge to the edge of the trailing fenestration hole until the leading haptic is fully folded on top of the optic.
5. Release the trailing haptic. With non-serrated forceps advance the IOL past the marker line, to ensure that the IOL is held in a folded position, by pushing on the haptic junction. Once the IOL is past the line, ensure the IOL and haptics remain in place after retracting the forceps until it is ready to be delivered.
6. To deliver the IOL, insert the cartridge tip into the incision with the IOL diagram facing up and the tip bevel facing down. Slowly rotate the plunger knob clockwise to advance the plunger. Ensure that the plunger tip engages the IOL, the haptics remain tucked, and the plunger remains behind the IOL throughout the entire delivery until the IOL is fully released into the eye.
