Levobunolol Hydrochloride Ophthalmic Solution USP

**FOR USE IN THE EYES ONLY**

Levobunolol hydrochloride is a noncardioselective beta-adrenoceptor blocking agent, equipotent at both beta, and less, receptor. Levobunolol hydrochloride is greater than 60 times more potent than the beta blockers, being equipotent at its beta-1 and beta-2 receptors.

**Patient Information**

Levobunolol hydrochloride is a noncardioselective beta-adrenoceptor blocking agent, equipotent at both beta, and less, receptor. Levobunolol hydrochloride is greater than 60 times more potent than the beta blockers, being equipotent at its beta-1 and beta-2 receptors.

**INDICATIONS**

Levobunolol hydrochloride ophthalmic solution is indicated for the reduction of increased intraocular pressure in open-angle glaucoma and ocular hypertension.

**CONTRAINDICATIONS**

Levobunolol hydrochloride ophthalmic solution is contraindicated in those individuals with bronchial asthma or with a history of bronchial asthma. Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**WARNINGS**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**Drug Interactions**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**ADVERSE REACTIONS**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**OVERDOSAGE**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**REFERENCES**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

**PATIENT INFORMATION**

Levobunolol hydrochloride ophthalmic solution USP is a noncardioselective beta-adrenoceptor blocking agent for ophthalmic use. It is contraindicated in patients with angle-closure glaucoma, because the use of a beta-adrenoceptor blocking agent in this condition may precipitate an acute episode of angle-closure glaucoma.

By using topical ophthalmic beta-adrenergic blocking agents, one might experience adverse effects due to the inhibition of circulating beta-receptors in the body, which can lead to symptoms such as visual disturbances, eye pain, and changes in pupil size.

**Possible Side Effects:**

- Visual disturbances
- Eye pain
- Changes in pupil size

**Contraindications:**

- Patients with asthma cannot use this medication.
- Those with a history of bronchospastic disease should avoid this drug.
- Patients with severe mitral stenosis should not use this medication.

**Warnings:**

- Do not use if you are allergic to any of its components.
- Use with caution in patients with severe asthma or bronchial asthma.
- Avoid using this medication in patients with diabetes.

**Usage:**

- It is important to use this medication as directed by your healthcare provider.
- Avoid using more than prescribed.

**Precautions:**

-告知 your healthcare provider about all medications you are taking or discontinuing.
- Do not drive or operate heavy machinery until you know how this medication affects you.

**Storage:**

- Keep out of reach of children.
- Store at room temperature.

**Overdose:**

In case of overdose, seek immediate medical attention.
