**Boston ORIGINAL Conditioning Solution**

For Fluoro Silicone Acrylate and Silicone Acrylate Gas Permeable Contact Lenses

**DIRECTIONS FOR USE:** To ensure proper disinfecting, all steps listed below must be followed:

1. Wash hands with mild soap. (Caution – pump soaps may contain oil-based suspension agents.)
2. After cleaning with Boston Original Cleaner, rinse thoroughly with a saline indicated for the care of gas permeable contact lenses. Bausch + Lomb Sensitive Eyes Saline is recommended. Place lenses in an empty lens case and fill to top ridges with fresh Boston Original Conditioning Solution. Soak lenses for at least 4 hours (or overnight) before wearing. Always use fresh solution for soaking and storing lenses. Do not use saline to disinfect lenses.
3. After removing lenses from the lens case, apply fresh Boston Original Conditioning Solution to wet lenses for additional cushioning, if desired and insert. Discard solution from lens case after each use.

**ALWAYS follow your eye care practitioner’s instructions. Based upon your individual tear chemistry and lens-wearing schedule, your eye care practitioner may recommend additional products or procedures.**

If not wearing contact lenses immediately, store in closed lens case. Do not store your lenses in simple saline. Saline solution will not disinfect.

**DESCRIPTION:** A sterile, aqueous buffered, solution containing a cellulose viscous, cationic cellulose derivative polymer and polyvinyl alcohol as wetting and cushioning agents; preserved with chlorhexidine gluconate (0.006%) and edetate disodium (EDTA) (0.05%).

**ACTIONS:** Boston Original Conditioning Solution contains a wetting agent that coats the surface of your lenses to make them smooth, wet and comfortable between your lenses and your eyes.

**INDICATIONS:** For wetting, disinfecting and soaking (after cleaning and rinsing) of fluoro silicone acrylate and silicone acrylate gas permeable contact lenses.

**CONTRAINDICATIONS:** (Reasons not to use): Not For Use With Soft (Hydrophilic) Contact Lenses. Do not use this solution if you are allergic to any component of this product.

**WARNINGS:** To avoid contamination, never touch the dropper tip of the container with your hands or to any surface. Keep the bottle tightly closed when not in use. Contact lenses and solutions, if not handled properly can become contaminated by common bacteria known to cause ocular infections. Serious damage to the eye and loss of vision may result from using contaminated solution or from wearing contaminated or damaged contact lenses.

**Problems with Contact Lenses and Lens Care Products could result in Corneal infection and/or Ulcer and Lead to Loss of Vision.** It is essential that you follow your eye care practitioner’s directions and all labeling instructions for proper use of lenses and lens care products, including the lens case.

Eye problems, including corneal ulcers, can develop rapidly and lead to loss of vision. Daily wear lenses are not indicated for overnight wear and should not be worn while sleeping. Clinical studies have shown the risk of serious adverse reactions is increased when these lenses are worn overnight. Extended wear lenses should be regularly removed for cleaning and disinfection or for disposal and replacement on the schedule prescribed by your eye care practitioner. Clinical studies have shown that there is an increased incidence of serious adverse reactions in extended wear contact lens users as compared to daily wear contact lens users. Studies have also shown that the risk of serious adverse reactions increases the longer extended wear lenses are worn before removal for cleaning and disinfection or for disposal and replacement. Studies have also shown that smokers have a higher incidence of adverse reactions. If you experience eye discomfort, excessive tearing, vision changes or redness of the eye, immediately remove your lenses and promptly contact your eye care practitioner. It is recommended that contact lens wearers see their eye care practitioner twice each year, or if directed, more frequently.

**Soaking Your Lenses - Boston Original Conditioning Solution:**

- You should fill your lens case with fresh Boston Original Conditioning Solution every time you disinfect your lenses, and never “top-off” or re-use solution. You should discard your solution immediately after your lenses have been removed from the lens case.
- You should not expose or store your lenses in or rinse your lens case with any water, such as tap, bottled or distilled, or with any non-sterile solution.

**WARNING:**

- Failure to discard solution from lens case after each use, “topping off” solution or use of water to care for your lenses may lead to contamination resulting in eye injury and potential loss of vision.
- Rub and Rinse Time with Original Formula Boston Cleaner:
  - Rub both sides of the lenses carefully with 2 to 4 drops of Boston Original Cleaner in the palm of your hand for 20 seconds.
  - Direct a steady stream of saline solution onto each side of the lens for at least 5 seconds, or as needed to remove the cleaner.

**WARNING:**

- You should follow the complete recommended lens rubbing and rinsing times in the product labeling to adequately disinfect your lenses and reduce the risk of contact lens contamination. Reduced rubbing or rinsing time may not adequately clean your lenses.
- Never use water, saline solution, or rewetting drops to disinfect your lenses. These solutions will not disinfect your lenses. Not using the recommended disinfectant can lead to severe infection, vision loss or blindness.

**Lens Case Care:**

- Clean contact lens cases each time you remove your lenses with digital rubbing with fresh, sterile disinfecting solution. Never use water. Cleaning should be followed by rinsing with fresh, sterile disinfecting solutions (never use water) and wiping the lens cases with a fresh, clean tissue is recommended. Air-drying or recapping the lens case lids after use without any additional cleaning methods should be avoided. If air drying, be sure that no residual solution remains in the case before allowing it to air dry.
- Replace the lens case at least once every 3 months or as directed by your eye care practitioner.
- Contact lens cases can be a source of microbial growth.

**WARNING:**

- Do not store your lenses or rinse your lens case with water or any non-sterile solution. Only use fresh solution so you do not contaminate your lenses or lens case. Use of non-sterile solution can lead to severe infection, vision loss or blindness.

**WATER ACTIVITY:**

- Do not expose your contact lenses to water while you are wearing them.
- Ask your eye care practitioner for recommendations about wearing your lenses during any activity involving water.

**DISCARD DATE:**

- Discard any remaining solution within 90 days after opening.

**WARNING:**

- Using your solution beyond the discard date could result in contamination of the solution and can lead to severe infection, vision loss or blindness.

**ADVERSE EFFECTS:**

- The following problems may occur:
  - Eyes stinging, burning, itching (irritation)
  - Excessive watering (tearing) of the eyes
  - Unusual eye secretions
  - Redness of the eyes
  - Reduced sharpness of vision (visual acuity)
  - Blurred vision
  - Sensitivity to light (photophobia)
  - Dry eyes

If you notice any of the above:

**IMMEDIATELY remove your lenses.**

- If the comfort or problem stops, then look closely at the lens.
- If the lens is in any way damaged, do not put the lens back on your eye. Place the lens in the lens case and contact your eye care practitioner.
- If the lens has dirt, an eyelash, or other foreign body on it, or the problem stops and the lens appears undamaged, thoroughly clean, rinse and disinfected the lens, then reinsert it.

If the problem continues, IMMEDIATELY remove the lens and consult your eye care practitioner.

If any of the above symptoms occur, a serious condition such as infection, corneal ulcer, neovascularization or iritis may be present. Seek immediate professional identification of the problem and prompt treatment to avoid serious eye damage.

When you visit your eye care practitioner for the assessment of a potential eye infection take your lenses, solutions and lens case to your appointment for possible culturing in order to better establish the identity of any micro-organisms.

**Good Lens Care Hygiene:**

- Always wash and rinse your hands before you handle your lenses.
- Clean, rinse and disinfect your lenses each time you remove them.
- Always handle the same lens, the right or the left, first in order to avoid mix-ups.
- Before first and after each additional use, always empty and rinse the lens case, and allow to air dry.

**How Supplied:** Boston Original Conditioning Solution is supplied in a sterile 3.5 FL OZ (105 ml) bottle. All retail Boston Solutions are packed in unit cartons. Bottles are sealed with an imprinted neckband and marked with a lot number and expiration date.
